

Flower Shop Management System

1. Database Description

The **Flower Shop Management System** is a database application used to manage the daily operations of a flower shop. It stores information about customers, flowers, orders, suppliers, payments, employees, and deliveries. The system helps maintain flower inventory, process customer orders, manage payments, and track deliveries efficiently. It reduces manual work, improves accuracy, and ensures better customer service.

2. Entities, Attributes, and Primary Keys
